About Us

Osian Infotech Pvt. Ltd. centers on the idea of helping businesses make meaningful connections with their customers. The founders combined strategy and technology expertise and set out to create a better way. We work with our customers from strategy to execution to get to know their business, understand the industry, and help foster growth. For over a decade, we have worked with some of the world's most forward-thinking, independent businesses and multinational enterprises. We are compact, agile, and faster than the bigger agencies and not willing to sacrifice personal attention for scale.

That's our story. Now let's hear yours.

Job Description

We're searching for an enthusiastic Software Engineer to help us design, build, and deploy software solutions.

A Software Engineer's responsibilities include gathering customer requirements, defining system functionality, and building code in Python (Django/Flask). Our ideal candidates are eager to learn and take an active role in understanding the software development lifecycle.

The Software Engineer's ultimate goal is to create high-quality, innovative, and fully functional software that adheres to coding standards and technical design.

Responsibilities

- Collaborate with team members to determine best practices and client requirements for the software.
- Create user-friendly software that meets and exceeds the client's expectations.
- Analyze and test programs and products before the formal launch.
- Develop programs to actively monitor the flow of confidential information to ensure software security.
- Integrate third-party apps and software components.

Criteria

Must have

• Python (Flask/Django, etc).
• Relational Database (Mysql/Postgres).
• 1-3 years of software development and implementation experience.
• Excellent teamwork and communication abilities are essential.
• Analyze the code for flaws and defects, then devise specific strategies to address them.

Good to have.

• Understanding of microservices architecture.
• Frontend technologies: Knowledge of front-end technologies such as Angular, React, Flutter is a huge plus.
